

Inland Gas Upgrades

About this project

We're upgrading 29 natural gas lines in the Northern, Thompson-Okanagan, Cariboo and Kootenay regions of BC.

All of these lines have an excellent safety record, including those in operation since the 1950s. These upgrades, combined with our ongoing inspection and maintenance activities, will help ensure we can continue to provide the safe, reliable service our customers count on now, and well into the future.

In some areas we're replacing gas lines, while in others we're adding pressure regulating stations in order to lower the pipeline operating pressure. Many of our upgrades will allow us to inspect the inside of the gas lines using "in-line" inspection equipment.

Work in your community

Construction activities are occurring within 18 communities and surrounding areas between 2020 and 2024.

While the vast majority of this work is taking place on existing rights of way, it could mean construction will occur in, or near, your community.

We're committed to engaging with communities we serve and keeping our customers informed during every step of this process.
