Subject: Eagle Mountain – Woodfibre Gas Pipeline Project
Surface Water Quality Sampling along the Bedrock Tunnel Alignment – Revision 1

File: 704-ENG.VGEO03612-03.004
FEI #: P-00763-ENV-MEM-2005

1.0 INTRODUCTION

Tetra Tech Canada Inc. (Tetra Tech) was retained by McMillen Jacobs Associates (MJA) to conduct surface water quality sampling and analysis of various drainages along a section of the proposed Eagle Mountain – Woodfibre Gas Pipeline (EGP) Project in Squamish, BC.

FortisBC Energy Inc. (FortisBC) has proposed the construction of approximately 48 km of nominal pipe size (NPS) 24 gas pipeline beginning from a location north of the Coquitlam Watershed in Metro Vancouver to the former Woodfibre pulp mill site (the Woodfibre site) located southwest of Squamish, BC. Approximately 9 km of the proposed alignment from Squamish to Woodfibre, is proposed for installation within the EGP Tunnel, under the Squamish River Estuary and through the bedrock on Monmouth Ridge. Approximately 4.9 km of this tunnel will be excavated in bedrock using a tunnel boring machine (TBM) and is identified as the Bedrock Tunnel. The Bedrock Tunnel extends from the Woodfibre Portal at Ch. 8+708m to the Interface Reach at approximately Ch. 3+746 m.

The objective of the surface water quality sampling and analysis was to determine the baseline water quality of the drainages for use during tunnel inflow water quality modeling, and Potentially Acid Generating (PAG) rock stockpile modeling. Water from the drainages that intersect with the tunnel alignment could infiltrate into the tunnel during excavation and may require treatment before being released into the environment as determined by future water quality sampling and analysis.

An additional aim of the testing was to assess the natural dissolved metal content of the drainages, at a time of year when flow was very low and predominantly sourced from groundwater springs rather than run off. The intent of this sampling is to conduct a high level, qualitative assessment on the likelihood of dissolved metals being present within groundwater inflows into the Bedrock Tunnel.

2.0 METHODS

The surface water quality sampling was conducted by Tetra Tech personnel on August 19, 2021. The methodology for completing the investigation is found in the subsections below.

2.1 Study Area

The study area is located along the Bedrock Tunnel section of the proposed EGP Project in Squamish, BC (Figure 1). Samples were collected from drainages present on the Woodfibre site (including Mill Creek, the Quarry Entrance, Quarry Drainage and the Portal Site), and from drainages located along the coast between the Woodfibre site and the Squamish River (including WC-A, WC-K, WC-U, WC-V, and WC-N and WC-R).

2.2 Surface Water Sampling

The surface water quality sampling was conducted on August 19, 2021 during the driest time of year (late summer) to maximize the likelihood that any water flowing through the drainages was sourced from groundwater springs/seeps and not from rainfall or surface run-off.

Drainages on the Woodfibre site were accessed by truck, and drainages along the coast were accessed by boat. A georeferenced map showing all the mapped drainages in the area was used to navigate to each potential sampling sites (Figure 1), and presence of flow was determined visually. If flow was observed, the drainage was sampled.

At each drainage, in-situ parameters including water temperature (°C), dissolved oxygen (mg/L), total dissolved solids (mg/L), electrical conductivity (µS/cm), salinity (ppt), oxidation-reduction potential (mV) and pH (relative units), were measured using a YSI ProPlus Quattro multiparameter meter. Instruments used for field in-situ sampling were calibrated according to manufacturer's specifications prior to the sampling event.

Surface water samples for laboratory analysis were collected at each site according to the methods described in the BC Field Sampling Manual, Part E, Water and Wastewater Sampling¹. Collected samples were sent under chain-of-custody (CoC) protocol to ALS Environmental in Burnaby, BC and underwent laboratory analysis for acidity, alkalinity, anions, dissolved and total metals, and dissolved mercury.

One trip blank, one field blank, and sample duplicates taken every ten samples were collected and submitted for quality assurance/quality control (QA/QC) purposes. The objective of the QA QC program is to assess that all water samples are collected in a similar manner, using standardized protocols designed to maintain accuracy and precision and to monitor for and identify sources of contamination or sampling errors. Trip blanks are meant to detect contamination from within the sample bottle (including caps). Field blanks mimic the sampling and preservative process of the field-collected samples but do not come in contact with surface water. Consequently, they provide information on contamination resulting from the handling technique, preservation and exposure to the atmosphere or sampling environment. Duplicate samples are two independent samples that are collected as close as possible to the same point in space and time (i.e., in quick succession) and are intended to be identical. A comparison of the duplicate samples involved calculating the Relative Percent Difference (RPD) between the duplicate pair. Results were calculated as follows:

$$\text{RPD (\%)} = 2 \times 100 \times |X - Y| / (X + Y)$$

Where:

X = the measured concentration in the original sample

Y = the measured concentration in the duplicate sample.

¹ B.C. Ministry of Environment & Climate Change Strategy. 2013. BC Field Sampling Manual, Part E, Water and Wastewater Sampling. Prov. B.C., Victoria B.C.

Per the BC Environmental Laboratory Manual (2020), RPDs should be calculated and assessed only when both the sample and the duplicate concentration is greater than five times the method detection limit (MDL), referred to as the Practical Quantification Limit (PQL). When evaluating the RPD for the duplicate sample, a threshold of 20% was applied to assess if samples were considered within acceptable limit of variation. Should the RPD exceed the threshold value, an explanation for the variation is required.

3.0 RESULTS

Surface water was able to be sampled from the ten locations shown on Figure 1. It should be noted that the drainage at WC-A did not have sufficient water depth to take YSI measurements. At this location there was a small seepage flowing over the rockface and the bottles were filled up by holding them under seepage and letting water trickle into the bottle which effectively equates to collecting a sample from within a flowing watercourse.

The results of the analyses were compared against the 2019 British Columbia Approved Water Quality Guidelines (BCAWQG) and the 2020 Working Water Quality Guidelines for freshwater aquatic life and marine aquatic life^{2,3}. Given that the results consisted of a single sampling event, the short-term guidelines were used for comparison.

The surface water analytical results are provided in Table 1, and cells with exceedances of the BCAWQG are bolded and shaded. Table 2 provides the results of the quality assurance/quality control samples. A copy of the laboratory report from ALS is included in Appendix A.

Tetra Tech's primary findings after review of the analytical data were as follows:

- **Quarry Drainage** had exceedances for pH and dissolved copper.
- **Quarry Entrance** had exceedances for dissolved oxygen, pH, dissolved aluminum, and dissolved copper.
- **Mill Creek** had exceedances for pH and alkalinity.
- The **Portal Site** had exceedances for temperature, pH, alkalinity, and dissolved copper.
- **WC-A (unmapped)** had exceedances for total beryllium, total iron and total uranium. These exceedances are likely associated with the fact the water was collected directly from a rockface seepage.
- **WC-K** had exceedances for temperature and dissolved copper.
- **WC-U** and **WC-V** had exceedances for temperature.
- No exceedances were detected at **WC-N** or **WC-R**.

Unless stated above, all other parameters tested for at the ten sample locations were at levels acceptable under the BCAWQGs.

With respect to QA/QC, the analytical results for the field and trip blank were below the analytical detection limit for all parameters, indicative that no contamination was introduced via the sample bottles nor during the sampling process. All RPD values of parameters that met the PQL requirement within the duplicate samples were below the 20% threshold, indicative that the duplicate sample pair was within acceptable limit of variation. Therefore, the analytical results obtained during the surface water quality sampling and analysis were considered representative of natural surface water quality conditions.

4.0 INITIAL INTERPRETATION OF RESULTS

The water quality results provided in this memo were obtained during a single sampling event conducted during an atypically dry season. As such, the results are only able to provide very limited insight into baseline water quality within the drainages sampled. However, these results did indicate that a number of the drainages sampled had naturally occurring exceedances of dissolved and total metals to which the aquatic ecosystem has likely adapted. Pending further baseline sampling to confirm if these parameters are, in fact, naturally elevated, if similar exceedances are detected in future sampling events (i.e., during construction), baseline findings would serve as a basis for comparison to assess if construction related impacts are occurring.

It was noted that from the drainages that cross the alignment in the western section of the tunnel (WC-U, WC-V, WC-N and WC-R) that there were no exceedances, with the exception of temperature, which was likely elevated due to extended periods of warm weather and low flows.

The results indicate there are naturally elevated levels of dissolved and total metals within a number of drainages along the alignment including the Quarry Drainage, Quarry Entrance, the Portal Site, WC-A and WC-K. It is noted that the WC-K drainage which emanates into Howe Sound at Tantalus Landing, drains a much larger upslope area in comparison to the other creeks, which has been termed the "Central Domain". Based on previous studies, the Central Domain is known to contain PAG rock. In examining the results from the Portal Site, it should be noted that the creek partly drains and is adjacent to a landfill. There is also notable rubbish, garbage and scrap metal in the creek.

During construction, routine water sampling will occur within the tunnel from sustained inflows greater than 10 litres per minute, and should exceedances be found, then a decision will be made if these water inflows should be grouted up and effectively sealed. Based on the results of the sampling and testing program, this strategy may be required because exceedances were found during this sampling program.

One of the purposes of this initial sampling program was to undertake a high level, qualitative assessment of the likelihood of dissolved metals being elevated within watercourses that could contribute inflows into the Bedrock Tunnel. Given that only drainages that were observed to be flowing were able to be sampled on August 19, it is recommended that additional samples be taken during a wetter time of year when all the drainages are flowing to provide more conclusive findings as well as to provide a more robust baseline data set of surface watercourses potentially interacting with the Bedrock Tunnel and associated infrastructure.

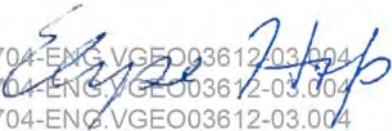

5.0 LIMITATIONS OF REPORT

This report and its contents are intended for the sole use of McMillen Jacobs Associates and their agents, including FortisBC Energy Inc. Tetra Tech Canada Inc. (Tetra Tech) does not accept any responsibility for the accuracy of any of the data, the analysis, or the recommendations contained or referenced in the report when the report is used or relied upon by any Party other than McMillen Jacobs Associates, or for any Project other than the proposed development at the subject site. ALS CERTIFICATE OF ANALYSIS AND ANALYTICAL RESULTS

CERTIFICATE OF ANALYSIS

| | | | |
|-------------------------|---|-------------------------|--|
| Work Order | : VA21B7621 | Page | : 1 of 14 |
| Client | : Tetra Tech Canada Inc. | Laboratory | : Vancouver - Environmental |
| Contact | : Elyse Hofs | Account Manager | : Brent Mack |
| Address | : 1000 - 885 Dunsmuir Street, 10th floor Vancouver BC Canada V6E 1N5 | Address | : 8081 Lougheed Highway Burnaby BC Canada V5A 1W9 |
| Telephone | : ---- | Telephone | : 778-370-3279 |
| Project | : ENG.VGE003612-03.004 | Date Samples Received | : 19-Aug-2021 18:55 |
| PO | : ---- | Date Analysis Commenced | : 23-Aug-2021 |
| C-O-C number | : 17-866829/830 | Issue Date | : 31-Aug-2021 10:20 |
| Sampler | : EH | | |
| Site | : ---- | | |
| Quote number | : VA21-EBAE100-004 | | |
| No. of samples received | : 14 | | |
| No. of samples analysed | : 13 | | |

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QC Interpretive report to assist with Quality Review and Sample Receipt Notification (SRN).

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is conducted in accordance with US FDA 21 CFR Part 11.

| Signatories | Position | Laboratory Department |
|-------------------|---|---------------------------------------|
| Caleb Deroche | Lab Analyst | Metals, Burnaby, British Columbia |
| Ilnaz Badbezanchi | Team Leader - Metals preparation | Metals, Burnaby, British Columbia |
| Kevin Duarte | Supervisor - Metals ICP Instrumentation | Metals, Burnaby, British Columbia |
| Lindsay Gung | Supervisor - Water Chemistry | Inorganics, Burnaby, British Columbia |
| Robin Weeks | Team Leader - Metals | Metals, Burnaby, British Columbia |
| Sristika Chand | Lab Analyst | Metals, Burnaby, British Columbia |

General Comments

The analytical methods used by ALS are developed using internationally recognized reference methods (where available), such as those published by US EPA, APHA Standard Methods, ASTM, ISO, Environment Canada, BC MOE, and Ontario MOE. Refer to the ALS Quality Control Interpretive report (QCI) for applicable references and methodology summaries. Reference methods may incorporate modifications to improve performance.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Please refer to Quality Control Interpretive report (QCI) for information regarding Holding Time compliance.

Key : CAS Number: Chemical Abstracts Services number is a unique identifier assigned to discrete substances
LOR: Limit of Reporting (detection limit).

| <i>Unit</i> | <i>Description</i> |
|-------------|----------------------|
| - | No Unit |
| mg/L | milligrams per litre |

<: less than.

>: greater than.

Surrogate: An analyte that is similar in behavior to target analyte(s), but that does not occur naturally in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery.

Test results reported relate only to the samples as received by the laboratory.

UNLESS OTHERWISE STATED on SRN or QCI Report, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.

| No. of samples analysed | : 13 | | |

This report is automatically generated by the ALS LIMS (Laboratory Information Management System) through evaluation of Quality Control (QC) results and other QA parameters associated with this submission, and is intended to facilitate rapid data validation by auditors or reviewers. The report highlights any exceptions and outliers to ALS Data Quality Objectives, provides holding time details and exceptions, summarizes QC sample frequencies, and lists applicable methodology references and summaries.

Key

Anonymous: Refers to samples which are not part of this work order, but which formed part of the QC process lot.

CAS Number: Chemical Abstracts Services number is a unique identifier assigned to discrete substances.

DQO: Data Quality Objective.

LOR: Limit of Reporting (detection limit).

RPD: Relative Percent Difference.

Summary of Outliers

Outliers : Quality Control Samples

- No Method Blank value outliers occur.
- No Duplicate outliers occur.
- No Laboratory Control Sample (LCS) outliers occur
- No Matrix Spike outliers occur.
- No Test sample Surrogate recovery outliers exist.

Outliers: Reference Material (RM) Samples

- No Reference Material (RM) Sample outliers occur.

Outliers : Analysis Holding Time Compliance (Breaches)

- Analysis Holding Time Outliers exist - please see following pages for full details.

Outliers : Frequency of Quality Control Samples

- No Quality Control Sample Frequency Outliers occur.

Analysis Holding Time Compliance

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times, which are selected to meet known provincial and /or federal requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by organizations such as CCME, US EPA, APHA Standard Methods, ASTM, or Environment Canada (where available). Dates and holding times reported below represent the first dates of extraction or analysis. If subsequent tests or dilutions exceeded holding times, qualifiers are added (refer to COA).

If samples are identified below as having been analyzed or extracted outside of recommended holding times, measurement uncertainties may be increased, and this should be taken into consideration when interpreting results.

Where actual sampling date is not provided on the chain of custody, the date of receipt with time at 00:00 is used for calculation purposes.

Where only the sample date without time is provided on the chain of custody, the sampling date at 00:00 is used for calculation purposes.

| Matrix: Water | | | | | | | | | | | Evaluation: ✗ = Holding time exceedance ; ✓ = Within Holding Time | | | |

Legend & Qualifier Definitions

EHT: Exceeded ALS recommended hold time prior to analysis.

Rec. HT: ALS recommended hold time (see units).

Quality Control Parameter Frequency Compliance

The following report summarizes the frequency of laboratory QC samples analyzed within the analytical batches (QC lots) in which the submitted samples were processed. The actual frequency should be greater than or equal to the expected frequency.

Matrix: Water

Evaluation: ✗ = QC frequency outside specification; ✓ = QC frequency within specification.

| Quality Control Sample Type | Analytical Methods | Method | QC Lot # | Count | | Frequency (%) | | Evaluation |
|---|--------------------|------------|----------|-------|---------|---------------|----------|------------|
| | | | | QC | Regular | Actual | Expected | |
| Laboratory Duplicates (DUP) | | | | | | | | |
| Acidity by Titration | | E283 | 273867 | 1 | 13 | 7.6 | 5.0 | ✓ |
| Alkalinity Species by Titration | | E290 | 273857 | 1 | 16 | 6.2 | 5.0 | ✓ |

Methodology References and Summaries

The analytical methods used by ALS are developed using internationally recognized reference methods (where available), such as those published by US EPA, APHA Standard Methods, ASTM, ISO, Environment Canada, BC MOE, and Ontario MOE. Reference methods may incorporate modifications to improve performance (indicated by "mod").

| Analytical Methods | Method / Lab | Matrix | Method Reference | Method Descriptions |
|------------------------------------|---|--------|-----------------------|---|
| Bromide in Water by IC (Low Level) | E235.Br-L Vancouver - Environmental | Water | EPA 300.1 (mod) | Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection. |
| Chloride in Water by IC | E235.Cl Vancouver - Environmental | Water | EPA 300.1 (mod) | Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection. |
| Fluoride in Water by IC | E235.F Vancouver - Environmental | Water | EPA 300.1 (mod) | Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection. |
| Nitrite in Water by IC (Low Level) | E235.NO2-L Vancouver - Environmental | Water | EPA 300.1 (mod) | Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection. |
| Nitrate in Water by IC (Low Level) | E235.NO3-L Vancouver - Environmental | Water | EPA 300.1 (mod) | Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection. |
| Sulfate in Water by IC | E235.SO4 Vancouver - Environmental | Water | EPA 300.1 (mod) | Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection. |
| Acidity by Titration | E283 Vancouver - Environmental | Water | APHA 2310 B (mod) | Acidity is determined by potentiometric titration to pH 8.3 |
| Alkalinity Species by Titration | E290 Vancouver - Environmental | Water | APHA 2320 B (mod) | Total alkalinity is determined by potentiometric titration to a pH 4.5 endpoint. Bicarbonate, carbonate and hydroxide alkalinity are calculated from phenolphthalein alkalinity and total alkalinity values. |
| Total Metals in Water by CRC ICPMS | E420 Vancouver - Environmental | Water | EPA 200.2/6020B (mod) | Water samples are digested with nitric and hydrochloric acids, and analyzed by Collision/Reaction Cell ICPMS. Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method. |

| Analytical Methods | | Method / Lab | Matrix | Method Reference | Method Descriptions |
|--|--|-------------------------------------|--------|----------------------------|---|
| Dissolved Metals in Water by CRC ICPMS | | E421 Vancouver - Environmental | Water | APHA 3030B/EPA 6020B (mod) | Water samples are filtered (0.45 um), preserved with nitric acid, and analyzed by Collision/Reaction Cell ICPMS. Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method. |
| Total Mercury in Water by CVAAS | | E508 Vancouver - Environmental | Water | EPA 1631E (mod) | Water samples undergo a cold-oxidation using bromine monochloride prior to reduction with stannous chloride, and analyzed by CVAAS |
| Dissolved Mercury in Water by CVAAS | | E509 Vancouver - Environmental | Water | APHA 3030B/EPA 1631E (mod) | Water samples are filtered (0.45 um), preserved with HCl, then undergo a cold-oxidation using bromine monochloride prior to reduction with stannous chloride, and analyzed by CVAAS. |
| Dissolved Hardness (Calculated) | | EC100 Vancouver - Environmental | Water | APHA 2340B | "Hardness (as CaCO ₃ , dissolved)" is calculated from the sum of dissolved Calcium and Magnesium concentrations, expressed in CaCO ₃ equivalents. "Total Hardness" refers to the sum of Calcium and Magnesium Hardness. Hardness is normally or preferentially calculated from dissolved Calcium and Magnesium concentrations, because it is a property of water due to dissolved divalent cations. |
| Hardness (Calculated) from Total Ca/Mg | | EC100A Vancouver - Environmental | Water | APHA 2340B | "Hardness (as CaCO ₃ , from total Ca/Mg)" is calculated from the sum of total Calcium and Magnesium concentrations, expressed in CaCO ₃ equivalents. "Total Hardness" refers to the sum of Calcium and Magnesium Hardness. Hardness is normally or preferentially calculated from dissolved Calcium and Magnesium concentrations, because it is a property of water due to dissolved divalent cations. Hardness from total Ca/Mg is normally comparable to Dissolved Hardness in non-turbid waters. |

| Preparation Methods | | Method / Lab | Matrix | Method Reference | Method Descriptions |
|------------------------------------|--|------------------------------------|--------|------------------|---|
| Dissolved Metals Water Filtration | | EP421 Vancouver - Environmental | Water | APHA 3030B | Water samples are filtered (0.45 um), and preserved with HNO ₃ . |
| Dissolved Mercury Water Filtration | | EP509 Vancouver - Environmental | Water | APHA 3030B | Water samples are filtered (0.45 um), and preserved with HCl. |

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits
- Reference Material (RM) Report; Recovery and Acceptance Limits
- Method Blank (MB) Report; Recovery and Acceptance Limits
- Laboratory Control Sample (LCS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is conducted in accordance with US FDA 21 CFR Part 11.

| Signatories | Position | Laboratory Department |
|-------------------|---|---------------------------------------|
| Caleb Deroche | Lab Analyst | Metals, Burnaby, British Columbia |
| Ilnaz Badbezanchi | Team Leader - Metals preparation | Metals, Burnaby, British Columbia |
| Kevin Duarte | Supervisor - Metals ICP Instrumentation | Metals, Burnaby, British Columbia |
| Lindsay Gung | Supervisor - Water Chemistry | Inorganics, Burnaby, British Columbia |
| Robin Weeks | Team Leader - Metals | Metals, Burnaby, British Columbia |
| Sristika Chand | Lab Analyst | Metals, Burnaby, British Columbia |

General Comments

The ALS Quality Control (QC) report is optionally provided to ALS clients upon request. ALS test methods include comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against predetermined Data Quality Objectives (DQOs) to provide confidence in the accuracy of associated test results. This report contains detailed results for all QC results applicable to this sample submission. Please refer to the ALS Quality Control Interpretation report (QCI) for applicable method references and methodology summaries.

Key :

Anonymous = Refers to samples which are not part of this work order, but which formed part of the QC process lot.

CAS Number = Chemical Abstracts Services number is a unique identifier assigned to discrete substances.

DQO = Data Quality Objective.

LOR = Limit of Reporting (detection limit).

RPD = Relative Percentage Difference

= Indicates a QC result that did not meet the ALS DQO.

Laboratory Duplicate (DUP) Report

A Laboratory Duplicate (DUP) is a randomly selected intralaboratory replicate sample. Laboratory Duplicates provide information regarding method precision and sample heterogeneity. ALS DQOs for Laboratory Duplicates are expressed as test-specific limits for Relative Percent Difference (RPD), or as an absolute difference limit of 2 times the LOR for low concentration duplicates within ~ 4-10 times the LOR (cut-off is test specific).

Method Blank (MB) Report

A Method Blank is an analyte-free matrix that undergoes sample processing identical to that carried out for test samples. Method Blank results are used to monitor and control for potential contamination from the laboratory environment and reagents. For most tests, the DQO for Method Blanks is for the result to be < LOR.

Laboratory Control Sample (LCS) Report

A Laboratory Control Sample (LCS) is an analyte-free matrix that has been fortified (spiked) with test analytes at known concentration and processed in an identical manner to test samples. LCS results are expressed as percent recovery, and are used to monitor and control test method accuracy and precision, independent of test sample matrix.

Sub-Matrix: Water

Matrix Spike (MS) Report

A Matrix Spike (MS) is a randomly selected intra-laboratory replicate sample that has been fortified (spiked) with test analytes at known concentration, and processed in an identical manner to test samples. Matrix Spikes provide information regarding analyte recovery and potential matrix effects. MS DQO exceedances due to sample matrix may sometimes be unavoidable; in such cases, test results for the associated sample (or similar samples) may be subject to bias. ND – Recovery not determined, background level >= 1x spike level.

APPENDIX B

LIMITATIONS ON THE USE OF THIS DOCUMENT

LIMITATIONS ON USE OF THIS DOCUMENT

GEOENVIRONMENTAL

1.1 USE OF DOCUMENT AND OWNERSHIP

This document pertains to a specific site, a specific development, and a specific scope of work. The document may include plans, drawings, profiles and other supporting documents that collectively constitute the document (the "Professional Document").

The Professional Document is intended for the sole use of TETRA TECH's Client (the "Client") as specifically identified in the TETRA TECH Services Agreement or other Contractual Agreement entered into with the Client (either of which is termed the "Contract" herein). TETRA TECH does not accept any responsibility for the accuracy of any of the data, analyses, recommendations or other contents of the Professional Document when it is used or relied upon by any party other than the Client, unless authorized in writing by TETRA TECH.

Any unauthorized use of the Professional Document is at the sole risk of the user. TETRA TECH accepts no responsibility whatsoever for any loss or damage where such loss or damage is alleged to be or, is in fact, caused by the unauthorized use of the Professional Document.

Where TETRA TECH has expressly authorized the use of the Professional Document by a third party (an "Authorized Party"), consideration for such authorization is the Authorized Party's acceptance of these Limitations on Use of this Document as well as any limitations on liability contained in the Contract with the Client (all of which is collectively termed the "Limitations on Liability"). The Authorized Party should carefully review both these Limitations on Use of this Document and the Contract prior to making any use of the Professional Document. Any use made of the Professional Document by an Authorized Party constitutes the Authorized Party's express acceptance of, and agreement to, the Limitations on Liability.

The Professional Document and any other form or type of data or documents generated by TETRA TECH during the performance of the work are TETRA TECH's professional work product and shall remain the copyright property of TETRA TECH.

The Professional Document is subject to copyright and shall not be reproduced either wholly or in part without the prior, written permission of TETRA TECH. Additional copies of the Document, if required, may be obtained upon request.

1.2 ALTERNATIVE DOCUMENT FORMAT

Where TETRA TECH submits electronic file and/or hard copy versions of the Professional Document or any drawings or other project-related documents and deliverables (collectively termed TETRA TECH's "Instruments of Professional Service"), only the signed and/or sealed versions shall be considered final. The original signed and/or sealed electronic file and/or hard copy version archived by TETRA TECH shall be deemed to be the original. TETRA TECH will archive a protected digital copy of the original signed and/or sealed version for a period of 10 years.

Both electronic file and/or hard copy versions of TETRA TECH's Instruments of Professional Service shall not, under any circumstances, be altered by any party except TETRA TECH. TETRA TECH's Instruments of Professional Service will be used only and exactly as submitted by TETRA TECH.

Electronic files submitted by TETRA TECH have been prepared and submitted using specific software and hardware systems. TETRA TECH makes no representation about the compatibility of these files with the Client's current or future software and hardware systems.

1.3 STANDARD OF CARE

Services performed by TETRA TECH for the Professional Document have been conducted in accordance with the Contract, in a manner

consistent with the level of skill ordinarily exercised by members of the profession currently practicing under similar conditions in the jurisdiction in which the services are provided. Professional judgment has been applied in developing the conclusions and/or recommendations provided in this Professional Document. No warranty or guarantee, express or implied, is made concerning the test results, comments, recommendations, or any other portion of the Professional Document.

If any error or omission is detected by the Client or an Authorized Party, the error or omission must be immediately brought to the attention of TETRA TECH.

1.4 DISCLOSURE OF INFORMATION BY CLIENT

The Client acknowledges that it has fully cooperated with TETRA TECH with respect to the provision of all available information on the past, present, and proposed conditions on the site, including historical information respecting the use of the site. The Client further acknowledges that in order for TETRA TECH to properly provide the services contracted for in the Contract, TETRA TECH has relied upon the Client with respect to both the full disclosure and accuracy of any such information.

1.5 INFORMATION PROVIDED TO TETRA TECH BY OTHERS

During the performance of the work and the preparation of this Professional Document, TETRA TECH may have relied on information provided by persons other than the Client.

While TETRA TECH endeavours to verify the accuracy of such information, TETRA TECH accepts no responsibility for the accuracy or the reliability of such information even where inaccurate or unreliable information impacts any recommendations, design or other deliverables and causes the Client or an Authorized Party loss or damage.

1.6 GENERAL LIMITATIONS OF DOCUMENT

This Professional Document is based solely on the conditions presented and the data available to TETRA TECH at the time the data were collected in the field or gathered from available databases.

The Client, and any Authorized Party, acknowledges that the Professional Document is based on limited data and that the conclusions, opinions, and recommendations contained in the Professional Document are the result of the application of professional judgment to such limited data.

The Professional Document is not applicable to any other sites, nor should it be relied upon for types of development other than those to which it refers. Any variation from the site conditions present, or variation in assumed conditions which might form the basis of design or recommendations as outlined in this report, at or on the development proposed as of the date of the Professional Document requires a supplementary investigation and assessment.

TETRA TECH is neither qualified to, nor is it making, any recommendations with respect to the purchase, sale, investment or development of the property, the decisions on which are the sole responsibility of the Client.

1.7 NOTIFICATION OF AUTHORITIES

In certain instances, the discovery of hazardous substances or conditions and materials may require that regulatory agencies and other persons be informed and the client agrees that notification to such bodies or persons as required may be done by TETRA TECH in its reasonably exercised discretion.
